PROJECT NAME	UNIVERSITY ADMIT ELIGIBILITY PREDICTOR

UNIVERSITY ADMIT ELIGIBILITY PREDICTOR

OBJECTIVE:

Many students benefit from college admission predictor. This not only assists students in filling out application forms, but it also provides students with an idea of their future college by calculating their cut off. When students come from rural areas, they find it difficult to follow the formal procedures. As a result, this application greatly benefits them and alleviates their anxiety. Whatever their scores are, this application can help them find the best colleges. As a result, our proposed computer-aided system will assist students in obtaining a list of all colleges to which they can gain admission with the click of a button. Students only need to enter their GRE, TOFFEL, UNIVERSITY RANK, and so on. Students can easily obtain a list of colleges, even branch and course specific, using this application. This not only simplifies the admissions process but also reduces stress for students. Our system's primary goal is to help students select the best colleges for them.
