

## Brainstorm

Executing a brainstorm isn't unique; holding a productive brainstorm is. Great brainstorms are ones that set the stage for fresh and generative thinking through simple guidelines and an open and collaborative environment. Use this when you're just kicking-off a new project and want to hit the ground running with big ideas that will move your team forward.

---

1.

Creating an interface that gives users the best experience and User Interface

2.

Users to enter their grades to predict the eligible universities

3.

The backend to process the marks provided by the users

4.

Suitable algorithm must be implied to take the inputs and process it

5.

Fetching the data from the predefined CSV file which contains the list of Universities using suitable algorithm

6.

The data should be processed using Applied data science techniques

7.

Using ADS method to train the data using a specified model for better prediction

8.

Transmitting the data fetched from the algorithm to Frontend user interface
